-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

1) Responsive to communication(s) filed on 11 July 2006.  
2a) This action is **FINAL**.      2b) This action is non-final.

**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of Contrast Container Holder and Method to Fill Syringes in the reply filed on 07/11/2006 is acknowledged.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 9-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Wilson et al (5,573,515). Wilson discloses a method comprising the steps of expelling substantially all air from the fill tube, thereafter, filling the syringe at a first rate wherein aeration of the contrast media is prevented, said first rate being faster than a second rate that is a maximum fill rate if air is not previously expelled from the fill tube; wherein the step of expelling includes drawing a first amount of contrast media into the syringe and expelling the first amount of the syringe and fill tube; or wherein the step of expelling includes expelling substantially all air from the syringe; or wherein the step of expelling and/or filling are performed by said contrast media injector automatically under the control circuitry of the injector [fig 2A-2B, col 5 lines 65-col 6 line 34, rate is variable and therefore able to be changed as needed].
4. Wilson discloses a method for changing contrast media containers during a syringe filling sequence, comprising the steps of pausing the syringe filling sequence of

a syringe when a first contrast container is substantially emptied; replacing the first contrast container with a second contrast container; expelling substantially all air from a fill tube coupled between the syringe and second contrast container, and thereafter, resuming filling the syringe from the second contrast container at a first rate wherein aeration of the contrast media is prevented, said first rate being faster than a second rate that is a maximum fill rate if air is not previously expelled from the fill tube; wherein the step of expelling further includes the step of expelling a portion of contrast media in the syringe out of the fill tube into the second contrast container; or expelling substantially all air from the syringe [col 5 line 65-col 6 line 34, inherent that device can fill more than one syringe and a person is capable of replacing first container with a second container.]
